## Foil Container Rim Styles

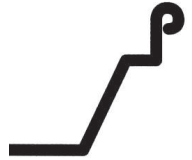

### Full Curl Rim

Specify this rim construction when you want to assure extra strength and rigidity to the container and provide greater protection for the product. This type of rim adds a touch of elegance to the container and is especially recommended when the container is used as a serving dish. You can use automatic packaging equipment and a variety of lids with the Full Curl Rim, including foil board lids and snap-on plastic covers.

### Interrupted Vertical Curl Flange

This rim construction uses a curled flange on the four sides of a rectangular container, plus a vertical flange for the corners. The result is a strong, attractive package which is easy to open.

### Vertical Flange Hemmed Edge

With this type of rim construction, you can use high-speed automatic equipment to cover the containers. The cover actually provides additional strength to the package when the vertical flange is crimped down over the cover. A variety of covers and cover materials may be used.

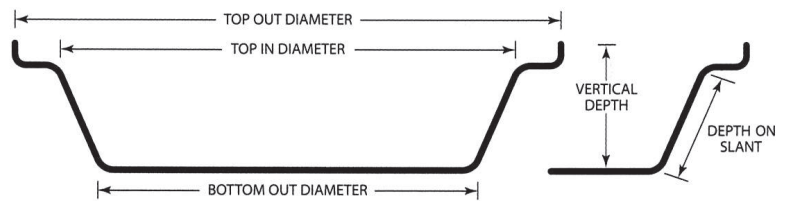

### Raise Full Curl

This rim is for plug-fit board covers, but they must be closed manually.

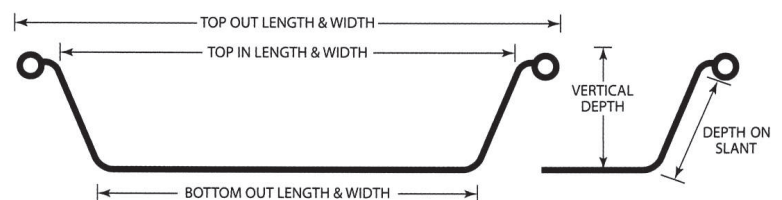

## Measuring Foil Containers

### Round Containers

If the container has a Full Curl Rim, Raised Full Curl Rim, or Semi Curl Rim, measure from container bottom to top of rim.

### Square and Rectangular Containers

If the container has an Interrupted Vertical Curl Flange, Raw Edge Rim, Vertical Flange with either Raw Edge or Hemmed Edge, measure from container bottom to ledge.
